

Site Name: Green School

Location: Bali, Indonesia

Project Overview

Increased water demand due to the growing tourism industry in Bali, Indonesia has left existing fresh water resources scarce. With a goal to be completely off-grid and decrease water stress in the area, the Green School, a private non-profit school located in the heart of the Bali jungle, needed a more sustainable and innovation-centered approach to drinking water and found SOURCE.

In September 2018, 6 SOURCE Hydropanels were installed at the Green School as part of their sustainability goals to be completely infrastructure independent. Together, the Green School and Zero Mass Water provide students a hands-on opportunity to learn about resilient technology and innovative solutions for drinking water.
