

**Site Name:** San Juan Home

**Location:** San Juan, Puerto Rico

## Project Overview

Recently devastated by Hurricane Maria, this home owner was unsure how he would access clean, reliable drinking water during the aftermath of disaster. In many places, the town water was shut off for months and grocery stores were constantly running out of bottled water. Now with SOURCE installed on the roof of his home, Salvador no longer has to wait in long lines at the grocery store for water because he makes his own from the sunlight and air all around him. With SOURCE, his water is resilient in the face of disaster.
