

Application: SOURCE for Communities

Site Name: Gundy Soldiers' Memorial Hall

Location: Hunter Valley, New South Wales

Installation Method: Rooftop

Array Size: 8 Hydropanels

Project Overview

The town of Gundy, New South Wales, once relied on rainwater harvesting, boreholes, bottled water, and the local river for their water supply. Facing severe drought, their local water supplies became severely strained, forcing residents to rely on bottled water alone. To provide a sustainable, non-extractive solution, the Town of Gundy installed eight SOURCE Hydropanels for the community to use to replenish their drinking water supply. The installation of SOURCE provides safe, reliable, and delicious drinking water for the community to enjoy, boosting community resilience to the drought.

This project received funding as part of ARENA's Advancing Renewables Program.
