

Application: SOURCE for Hospitality

Site Name: Hotel MUMEDI

Location: Ciudad de México, México

Climate-Type: Subtropical Highland

Array Size: 4 Hydropanels

Project Overview

Throughout Mexico, contaminated water and failed infrastructure leaves families and communities without a reliable supply of drinking water. Wanting to provide their guests an exceptional drinking water experience, Hotel MUMEDI ditched expensive, poor-quality water and found SOURCE, a low-maintenance, safe drinking water solution.

SOURCE at Hotel MUMEDI

SOURCE Hydropanels make and deliver delicious water to a personal in-room dispenser so guests never have to leave their room for water. In addition, each hotel guest receives their very own frosted SOURCE water bottle at check-in so they can enjoy their SOURCE water on the go.
